## Summary DTP

(3)

Word processing software is used to create text documents and subtly edit, <sup>con</sup>figure it. For example, you can adjust font, color, title, margins, width between paragraphs and much more. There are ~~a~~ lots of open source and commercial software, including Microsoft Word, WordPerfect, Pages and Open Office - the most popular ones. Word processing ~~is~~ programs are widely used for producing printed and digital documents, but there are some cases where DTP-software should be used. DTP-software allows ~~you to~~ gives you much more control over page layout. It allows users to combine and ~~text~~ arrange text and images, work with multiple-page documents and forms (for example a folding brochure) and gives ~~biggest~~ amount of printing options. It is commonly used by graphic designers to create amazingly beautiful books, catalogs, billboard advertising banners and much more.

No matter what program you use ~~x~~, if you want to share the output file with someone but not printing it, the user ~~sh~~ has to have the same program to open that file. And here comes PDF ~~is~~ - Portable

Document Format. This type of files ④ preserves all the original formatting of your text file but doesn't require the original software to open it. Every text or graphical ~~for~~ file can be converted to PDF, that can be opened using PDF reader. PDF - widely used standard for sharing documents online.
